Trial true multi-platform business management, demo CD available to BPR readers for only \$30

KEY BENEFITS

- Ease of use
- Multi-platform
- Integrated business information
- All business functions
- Real-time updating, backed up with batch based locking
- Internet capable

Sapphire is a comprehensive client/server, double entry financial management system. Sapphire has been in development since 1985, and was first released in 1987. Covering all accounting functions at its core, Sapphire has an integrated database which enables it to utilise management features so well that it's installed base covers the broad areas of banking, manufacturing, mining, legal, construction, publishing, retailing, agriculture, primary producers and advertising to name a few. Sapphire is the

first Platform Independent Client/Server based accounting system. This allows your site to run a mixed system with Windows NT, Windows '95 or Mac OS running side by side, with the server being compatible with Windows NT, Windows '95 or Mac OS operating systems. Sapphire gives distributed processing and maximum control. Sapphire is featured in the FMIS Review book as the only Macintosh based accounting system approved by the Australian Department of Finance.

Sapphire, unlike most accounting systems, is not purchased by modules. The package comes complete with Accounts Receivable, Accounts Payable, General Ledger, Cash General Ledger, Inventory, Sales Order Entry, Purchase Order Entry, Quotes, Requisition, Excel Link using DDE TCP/IP and Apple events, Time sheets, Retentions, Project Budgets, Projects, Front Office, Project General Ledger, Contacts, Diary, Payroll, Fixed Assets, Resources, Remote Access, Sapphire Remote, Workbook and Super Report.

Fantastic benefits are Platform Independent, multi-tasking, full back-up archive, retrieve archive, dynamic Excel Link, unlimited history, speedy data entry, full business information.

Sapphire is Internet capable allowing remote connections over internet/intranet connections with full control over who has access, and what data can be read or updated. These may be initiated via world wide web forms, java, javascript, or direct TCP/IP calls.
